Seq primer: -40UP from Gibboo

High quality sequence stop: 416.
                         Solution and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA was size fractionated on a 1% agarose gel. First strand cDNA was pytchesis was primed with Oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I addaptor, digested with NotI and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is AATAATTACG. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH)."

/ denatured and then reassociated in phosphate buffer at 650C. After a given Cot value was reached, aliquots were run through a hydroxyapatite (HAP) column in order to separate single stranded DNA from double stranded DNA. The single stranded DNA was then converted to a double stranded form with one round of Klenow DNA polymerase treatment with random 6-mer primers. The double-stranded fragments were then further size-selected through a column and cloned into the PCR4-TOPO vector"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Triticum aestivum (bread wheat)

/note="Grgan: Seedling; Vector: PCR4-TOPO; Wheat genomic DNA was Sheared to fragments averaging about 1.8 kb,
denatured and then reassociated in phosphate buffer at
650C. After a given Cot value was reached, aliquots were
run through a hydroxyapatite (HRP) column in order to
separate single stranded DNA from Gouble stranded form with one round of Klenow DNA polymerase
treatment with random 6-mer primers. The double-stranded
fragments were then further size-selected through a column
and cloned into the PCR4-TOPO vector"

An Arabidopsis full-length cDNA library was constructed essentially
an Arabidopsis full-length cDNA library was constructed with BamHI
and KhoI was ligated to modified Lambda FLC-1 vector (carninci et
al., submitted for publication) digested with BamHI and SalI. This
clone is in a modified Bluescript vector. Please visit our web
site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tigr-gss-dog-17000333558770 Dog Library Canis familiaris genomic, genomic survey sequence.

/clone_lib="N24": Shoot-root transition zone from young plants
(large insert library); Vector: pSport1; Site_1: SalI;
Site_2: Not1; An unidirectional cDNA library generated
from [Shoot-root transition zone from young plants (large
insert library)]. cDNA was prepared from poly4+ mRNA
using SuperScript Plasmid System Kit (Invitrogen). The
double-strand cDNAs were fractionated in a sepharose
CL-28 40cm-columns and fragments sizing between 0.8 and
1.5 Kb were directionally cloned into the vector. Details
of each source of RNA and library construction can be
obtained at http://sucest.lad.ic.unicamp.br/public"

/ lants were grown in the greenhouse. Anthers were harvested and pooled from early meiosis to late meiosis. The tissue, total RNA, and poly(A) RNA were prepared (Butler, Ross and Gustafson) at University of Missouri, Columbia. A cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript hasgemids in the TV Close lab (Choi, Close, Fenton) at the University of California, Riverside.
Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."
/clone_lib="1000 - Unigene I from Maize Genome Project"
/note="This library represents the unique ESTs found in
the first round of EST sequencing at Stanford University
for the maize genome project. Sequences are present from
libraries 486, 487, 496, 603, 605, 606, 614, 618, 660,
813, 687, 707, and 945. Contigs were assembled using
TIGR's CAP program and a representative EST from each
contig was selected for the Unigene set. All singlets were
also selected."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tong, J.C.

The structure and function of the expressed portion of the wheat genomes - Anther cDNA library from rye genomes - Anther cDNA library from rye (2000)

Patent No. 6545200

GENERAL INPORMATION:

APPLICANT: Fandou, Omolayo O.

APPLICANT: Cahoon, Rebecca B.

APPLICANT: Rafalshi, Hajime

APPLICANT: Madonigle, Brian

APPLICANT: Rafalski, J. Antoni

TILLE OF INVENTION: STEROL BIOSYNTHETIC ENZYMES

TILLE REFERENCE: 1999-12-15

CURRENT FILING DATE: 1999-12-15

EARLIER APPLICATION NUMBER: 60/112,555

EARLIER PILING DATE: 1998-12-16

NUMBER OF SEQ ID NOS: 44

SOFTWARE: Microsoft Office 97

SEQ ID NO 33

LENGTH : 66
               APPLICANT: Sakai, Hajime
APPLICANT: McGonigle, Brian
APPLICANT: McGonigle, Brian

Sequence 14603, Application US/09252991A

Patent No. 655175

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT FILING DAPLICATION NUMBER: US/09/252,991A
CURRENT FILING DAPE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 14603
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 27, Application US/09956004

Sequence 27, Application US/09956004

Patent No. 6787643

GENERAL INFORMATION:
APPLICANT: Patrick J. Dillon et al.
TITLE OF INVENTION: Nuclectide Sequences of Eacherichia coli Pathogenicity Islands
FILE REFRENCE: PB324D1

CURRENT APPLICATION NUMBER: US/09/956,004

CURRENT FILING DATE: 2001-09-20

PRIOR FILING DATE: 1997-11-21

PRIOR APPLICATION NUMBER: 60/061,953

PRIOR FILING DATE: 1997-10-14

PRIOR PILING DATE: 1996-11-22

NUMBER OF SEQ ID NOS: 142

SOFTWARE: PatentIn version 3.1

SEQ ID NO 27

LENGTH 1118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 14725, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

Sequence 3437, Application US/09543681A
Patent No. 6665709
GENERAL INPORMATION:
APPLICANT: GARY BRETON:
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: US/09543,681A
TITLE OF INVENTION: US/09/543,681A
TITLE OF INVENTION: US/09/543,681A
FILE REFERENCE: 2709.1002-001
FILE REFERENCE: 2709.1002-04-05
PRIOR FILING DATE: 2000-04-05
PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 3437
LENGTH: 5151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 14417, Application US/09949016

Sequence 17417, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 06/241,755
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR APPLICATION NUMBER: 60/231,498

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 22
US-09-549-848B-93/C
US-09-549-848B-93/C
; Sequence 93, Application US/09549848B
; Patent No. 6441259
; GENERAL INFORMATION:
APPLICANT: Lasener, Michael
; APPLICANT: Bost-Beittenmiller, Dusty
APPLICANT: Reiss, James
; TITLE OF INVENTION: Nucleic Acid Sequences
; TITLE OF INVENTION: Tocopherol Synthesis
; TITLE OF INVENTION: Tocopherol Synthesis
; CURRENT APPLICATION UNMBER: US/09/549,848B
; CURRENT APPLICATION NUMBER: US/09/549,848B
; PRIOR FILING DATE: 1999-04-15
; PRIOR PELING DATE: 1999-04-15
; PRIOR FILING DATE: 1999-04-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1; Indels
                                                                                                                                                                                                                                                                                  COMPUTER READABLE FUNCH:

MEDIUM TYPE: Ploppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOCTWARE: Patentin Release #1.0, Version #1.30

Sequence 1, Application US/09491356C

Patent No. 656601

GENERAL INPORMATION:

APPLICANT: Philibert, Robert A.

APPLICANT: Philibert, Robert A.

APPLICANT: Belisi, Lynn

TILE OF INVENTION: IDENTIFICATION OF POLYMORPHISMS IN THE PCTG4 REGION OF XQ13

FILE REFERENCE: 9465.6US11

CURRENT APPLICATION NUMBER: US/09/491,356C

CURRENT APPLICATION NUMBER: PCT/US99/09365

PRIOR FILING DATE: 1999-04-29

PRIOR FILING DATE: 1998-04-29

NUMBER OF SEQ ID NOS: 24

SOSTWARE: Patentin version 3.1

Sequence 20080, Application US/09270767

Sequence 20080, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

TILLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILLE REPRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 20080

LENGTH: 483
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-270-767-4798/C
